

# Peripheral Treatment with ePTFE

Spiral Support

# FlowLine Bipore

- It has a bipore design with double fibril length, resulting in low thrombogenicity.
- Provides superior suture adhesion and burst resistance thanks to the additional ePTFE layer.
- The special guide line on the graft indicates the diameter and wall thickness of the product.
- Bükülme ve sıkışma direnci için spiral destekli modelleri Spiral-supported models are available for bending and compression resistance.
- Excellent, flexible hold and ease of suturing.
- The spiral support can be removed easily and without damage.
